

BEFORE YOU LAUNCH

~5,000

AI-built apps were found
leaking data

Four checks to run on yours first.

WHAT HAPPENED

One scan. 5,000 leaks.

A May scan of apps built on AI app builders found thousands exposing sensitive data.

380,000

apps scanned

~5,000

exposing sensitive data

Lovable

Replit

Base44

and others

CHECK 1

Change the ID in the address bar

Log in as one user, then swap the ID for another user's.

● ● ● logged in as alex

you, as alex, change one number:

`yourapp.com/invoices/1043`

Sam's invoice loads — stop and fix it

Access denied — you're good

This was the flaw that hit Lovable in April.

CHECK 2

No secrets in the browser

Search the code that runs in the browser for API keys and secrets. There should be none.

terminal

```
$ grep -rE "sk_live_|service_role|_SECRET" ./dist
# searching the built browser bundle...
✓ no matches
```

Publishable keys (like Supabase's anon key) are fine. **Secret and service-role keys, never.**

CHECK 3

Lock every table

On Supabase, turn on row level security for every table — then test it with a second account.

● ● ● database · tables

profiles

RLS enabled

invoices

RLS enabled

messages

RLS disabled

```
alter table messages enable row level security;
```

CHECK 4

Break the payment on purpose

In test mode, double-click pay and drop your connection mid-payment.

One charge, every time. Anything else is a refund waiting to happen.

BONUS

Restore a backup — once

Before you ever need it. A backup you've never restored is a hope, not a backup.

● ● ● backups

- | | | |
|----|--------------------------------|----------------|
| 01 | Pick the latest backup | 2 hours ago |
| 02 | Restore it into a test project | not production |
| 03 | Log in and click around | ✓ it works |

WHY IT COSTS MORE

\$5K build vs \$15K build

These checks are most of what the extra money buys.

\$5K works in the demo

\$15K holds up when someone tries to break it

✓ access checks

✓ no exposed secrets

✓ database rules

✓ safe payments

✓ tested backups

Not sure what yours **would show?**

Send me a message and I'll tell you where I'd look first.
